

Mailer Closure Options

Explore versatile mailer closures for efficient and secure shipping.

Options include Plain bags for cost-effective flexibility, Peel & Seal for a hassle-free adhesive seal, Resendable for sustainability and easy returns, and Rip-A-Tape for resilient resealing.

Find the perfect closure to enhance your packaging efficiency!

Plain (No Closure)

A Plain (no closure) shipping bag is a versatile and cost-effective packaging option for various items. Without an integrated closure, it requires external sealing methods like tape or glue, offering simplicity and adaptability to different sizes and shapes. Whether used for small parcels or larger packages, plain shipping bags provide practical solutions for mailing items.

Peel & Seal (Pressure Sensitive Adhesive)

The Peel & Seal (Pressure Sensitive Adhesive) closure in shipping bags is user-friendly and efficient. It incorporates a self-adhesive strip that securely seals upon applying pressure. The "peel" involves removing a protective backing, making it easy to seal the bag. This time-saving closure eliminates the need for additional materials like tape or glue, providing a reliable and tamper-evident solution for secure transit.

Resendable

Featuring a perforated quick-open tear strip between a first-seal and a reseal adhesive strip, the resealable closure is ideal for packages that may require return shipping. This innovative design allows easy initial access through the tear strip while maintaining the bag's integrity. The reseal adhesive strip facilitates effortless sealing for return shipping, promoting convenience and sustainability without the need for new packaging materials.

Rip-A-Tape

The Rip-A-Tape closure features a reinforced pull strip with tear tape for easy package opening and resealing. The strengthened tape ensures a clean tear during mailer opening, preserving the integrity of both the mailer and the secondary adhesive strip for return shipping. This design prioritizes user convenience, offering a swift and secure opening while preventing accidental tearing during transit. The resealable closure is a dependable choice for repetitive use, ensuring the packaging remains intact and functional throughout its lifecycle.
